EASIER PROCESS. INCREDIBLE PROGRESS.

The clear path to incredible smiles.

The path to straighter teeth should be simple. For dental practitioners like yourself – and your patients. TrioClear™ makes it easier in all kinds of ways.

Our progressive aligner systems use minimal attachments and TrioDim Force™ technology to stay in place – with features like an almost-invisible CE-marked material and pre-formed buttons on the aligners all working to protect your patient's oral health, reduce the time in the chair and avoid any unscheduled visits.

It's easier to predict how TrioClear™ will move your patients' teeth towards better results as well, with features like our clinical simulation software and a higher level of gingival coverage.

Soft

~0.5mm thickness

An easier process. For greater progress.

TrioClear's™ solutions are available exclusively through Southern Cross Dental in Australia and New Zealand. So when you choose our aligner systems, you'll be getting over forty years' worth of experience and support as well.

Once you've completed the digital scans or traditional impressions from your initial patient consultation, you can submit them through your MySCD portal – for a free online assessment to see if your patient's case is suitable. You'll also have access to ongoing education and training – through webinars and events – to help you achieve more incredible outcomes for your patients.

Hard

~0.7mm thickness

Packages to suit every smile.

No two smiles are the same – and the TrioClear™ system makes it easy for you to adapt a package to suit each patient.

TrioClear™ Package Options					Price	
	Max. number of Aligners per jaw	Teeth movement limitation	Retrack during Treatment	Refinement af. treatment	Single Arch	Dual Arch
